

## **Duncan Park acquires 270 more claims in Nevada**

2006-11-10 15:58 ET - News Release

Mr. Leonard Taylor reports

### **DUNCAN PARK HOLDINGS CORPORATION ACQUIRES ADDITIONAL CLAIMS AT ROCK CREEK-SOUTH SILVER CLOUD EXPLORATION PROJECT, LANDER AND EUREKA COUNTIES, NEVADA**

Duncan Park Holdings Corp. has acquired an additional 270 claims for greater than an additional seven square miles of exploration properties along the north-northwest-trending Rock Creek/South Silver Cloud claims group.

The addition of these claims solidifies Duncan Park's land position between the Rock Creek exploration project on the southern end and the South Silver Cloud property at the northern end. The trend of alteration is on a long trend with other known mineralized systems such as Silver Cloud and the Ivanhoe properties to the north. Please refer to the Duncan Park's website for additional information on these properties.

The exploration targets are Midas-style volcanic-hosted epithermal vein systems at shallow levels and possible Carlin-type disseminated gold hosted in both upper and lower plate lithologies at depth.

The additional claims cover medium-to-low-rolling topography with several subcrops of siliceous sinter, oxidized clay alteration and minor quartz veinlet-bearing breccias indicative of epithermal mineralization at depth.

This report was prepared by Greg Griffin, BSc, geology, regional manager of Duncan Park Holdings Nevada Ltd., a subsidiary of Duncan Park. The data herein and the contents of this press release have been reviewed by Larry Kornze, BSc, geological engineering, a director of Duncan Park, who is designated as the qualified person for purposes of National Instrument 43-101, with the ability and authority to verify the authenticity and validity of these data. Duncan Park intends to post shortly an updated exploration report on its website.

We seek Safe Harbor.
